

WHAT IS CLAIMED IS:

1. An anti leakage device of lubrication oil for a fan, comprising:
a hub seat;

5 a sleeve, being provided on the hub seat and having a bearing
therein to form an oil storage part for receiving lubrication oil; and
a hub, being provided on the hub seat and having an annular
recess at the inside thereof for being inserted with the sleeve;

whereby, leakage of the oil storage part can be avoided due to
provision of the annular recess.

10 2. The anti leakage device of lubrication oil for a fan as defined
in claim 1, wherein the hub is provided with a rotational shaft, which
is inserted into the sleeve, so that the hub can be pivotally attached
to the hub seat.

15 3. The anti leakage device of lubrication oil for a fan as defined
in claim 2, wherein a durable pad is disposed in the sleeve to contact
with an end of the rotational shaft to reduce frictional resistance
during the shaft rotating.
